VITAL STATISTICS

Year Founded: 1994
Number of Employees: 70
Number of Facilities: 1
Annual Sales: Greater than \$10 Million

WHO WE ARE

Aubrey Group, Inc. located in Irvine, CA specializes in the design, and manufacture of electromechanical and disposable medical devices. Specialties include disposable cassettes, custom tubing sets, RF generators, wireless communication, patient monitoring, fluidics, implantables, blood processing and cardiovascular assist devices. Services include electronic, software, and mechanical engineering, industrial design, FDA submission, prototypes and flexible contract manufacturing. The company is an FDA-registered manufacturer and ISO 13485 certified. For more information, visit our website at www.aubreygroup.com.

MAJOR MARKETS

We offer broad-based technical skills for medical device design and manufacturing, supporting a range of clients from high-tech start-ups to established Fortune 100 companies. We design both disposable and equipment components in order to provide complete systems for our clients. We employ over 40 engineers and are 100% medical device focused.

SERVICES OFFERED

Located in the Irvine Spectrum in Southern California, Aubrey Group's services include system design, rapid prototyping, compliance testing, certification, full documentation, and contract manufacturing. Engineering services include system and electronic engineering, software and mechanical engineering, industrial design, and validation and verification.

Rapid Development

By leveraging our knowledge, design and fabrication of microprocessor-controlled products can be fast-tracked. Complex medical devices from concept to prototype often follow a system integration approach, leveraging our in-house technology. In addition, Aubrey Group streamlines documentation and data entry from initial services and confidentiality agreements through our ERP system. This approach has proven very successful in our fast-paced environment.

Project Management

Our management philosophy encourages a collaborative environment, where productivity demands and engineering creativity are balanced. The project manager provides weekly progress reports to budget and schedule, and remote, secure client access for project files. Emphasis is placed on client communication with contact across all functional levels of the client's team.

Quality Design

Our designs are safe, effective, and reliable. To meet these requirements, we analyze product risks, thoroughly specify requirements, simulate user interfaces, satisfy EMI thresholds, extensively test designs, and validate performance. Our designs also meet the requirements of the FDA, FCC, IEC and UL and we are an FDA registered medical device manufacturer.

Contract Manufacturing

As part of our time-to-market commitment in turnkey projects, our development team provides a seamless transition to manufacturing. This close integration means shorter turn-around, better in-process test methods, and quicker time-to-market.
